Art Unit: 2822

Claims 83-96 are withdrawn from further consideration by the examiner, 37 C.F.R. § 1.142(b) as being drawn to a nonelected invention. Election was made without traverse in Paper No. 7.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Group I, drawn to an ESD structure having at least one island along a length direction of a first diffusion positioned in non-symmetrical fashion.

Group II, drawn to an ESD structure having only one island along a length direction of a first diffusion region.

Group III, drawn to an ESD structure having an island across a length direction of a diffusion region formed at a predetermined angle.

Group IV, drawn to an ESD structure having an island with a first parallel portion and a second portion skewed portion and connecting at a predetermined angle.

Group V, drawn to an ESD structure having an island formed along a length of a diffusion and connected to a node.

Group VI, drawn to an ESD structure having an island in the first diffusion region in contact with the gate at a predetermined angle and a second island formed in the first diffusion in contact with the first island.

Group VII, drawn to an ESD structure having a plurality of island portion for blocking implanted ions and a metal bus partially overlapping the islands.

Group VIII, drawn to an ESD structure having a plurality of islands in contact with the gate, each island having a dendritic structure.

Art Unit: 2822

Group IX, drawn to an ESD structure having a plurality of islands formed along a length with portions of different lengths.

Group X, drawn to an ESD structure having at least one island having a length greater than 50% of a longitudinal dimension of a channel region and formed symmetrically along the length direction.

Group XI, drawn to an ESD structure having at least one island having a length greater than 50% of a longitudinal dimension of a channel region and formed non-symmetrically along the length direction.

Group XII, drawn to an ESD structure having at least one island having a length greater than 50% of a longitudinal dimension of a channel region and at least two portions formed at predetermined angles to one another.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 76 is generic to Groups I and III-XII. Claim 31 is generic to Groups X, XI and XII.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 2822

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
